

Supervisor Scan

Scan Release Station

Generate revenue from scanned documents, scan to email or save to a USB key

- Full-online transaction recording and reporting
- Cashless convenience of a centrally controlled on-line system

Supervisor Scan

Scan Release Station

Generate revenue from scanned documents, scan to email or save to a USB key

Increasingly, documents are demanded in electronic format for storage, signatures, or to import into a presentation. Previously, important documents and drawings were mailed or faxed to another party, but now you can release scanned documents straight to email.

Traditionally, for mailed or faxed documents, charges have been captured in time, postage or number of pages. With Supervisor Scan you can monitor and charge for document scan activity.

Key Benefits

For Users

- Ability to capture documents electronically
- No requirement for a facsimile machine
- Efficiently send documents quickly and conveniently
- Maintains an electronic record of sent documents
- Document can be saved to USB flash drive
- Email address book and "last used" email address options
- Preview documents before release
- Onscreen keyboard to enter Primary, Secondary or PIN numbers

For You

- Allows charges to be allocated to scan activities by user/client
- Allows centralized control of multiple scanners
- Can be added to an existing Monitor Transaction Management System
- Fully compatible with any Supervisor Net version 6 software
- Easy administration through a friendly user interface
- One Supervisor Scan station can monitor several scanners
- Can be configured to exit after a transaction has been completed. This is best used when launched from Supervisor Express.
- Supports hardware with touchscreens

Flexible

Supervisor Scan is a modular application, which controls and manages document scanning as part of the Monitor Transaction Management System controlled by a central PC. It may be added at any time without losing your initial investment and complements copy and print control applications. The following file types are supported: jpeg, tiff, pdf.

Ingenious

Supervisor Scan software communicates on-line with Monitor Supervisor Net allowing centralised control of multiple scan release stations. Documents can be delivered to an email address, a network directory or a USB flash drive, and charged in 'real time' to a users account.

Profitable

Supervisor Scan allows your organisation to manage and control scan activity. Generate a new revenue stream to replace one that may be reducing by the move from traditional methods of document capture and delivery. Different charge rates can be applied, if required, for different types of user, e.g. staff or student versus casual user. Supervisor Scan can be configured to charge by the number of pages or by the file size of the scanned document.
