Laundry Controller

Cashless laundry control

- Key pad, swipe and proximity card operation
- Controls up to 24 washing machines and dryers
- Full on-line transaction and reporting
- Centralised control, audit and management
Maximise your laundromat potential, by offering cashless capability with the Monitor Laundry Controller. The terminal allows users to pay for their laundry with their swipe card, from their Supervisor Net account, removing the need for cash. The controller is on-line allowing detailed monitoring and reporting to track and identify washing machine and dryer usage. This information enables you to optimise your laundry facility for maximum return on your investment.

**Key Benefits**

**For Users**
- Easy to use with cashless convenience
- Choice of cash or card payment method
- 24 hour self-service access to laundry facilities
- Security through PIN protection
- Protection if card is lost or stolen, as no value is stored on the card
- Off-line capability during network failures ensures service availability
- Transaction history via browser based reports
- Multiple wash and dry options available
- Display of machine availability, prompts and information

**For You**
- Secure access, user authentication and credit validation
- Auditing and customised reporting
- On line access to users funds will increase facility usage & drive loyalty
- Monitor machine usage to manage maintenance & demand
- Remote diagnostic and support capability
- Decrease cash collection and personnel overheads
- Cashless nature will decrease theft, vandalism and coin-jams
- Advertising opportunities on card
- Marketing incentives for time of day and frequent users

**Dynamic**
The Laundry Controller uses your existing Ethernet network to communicate to the powerful Monitor Supervisor Net Transaction Management System. It delivers real time transaction and device usage history, and access to remote diagnostic and support capability.

**Control**
The Laundry Controller controls up to 24 washers or dryers. The controller displays the status of each machine, showing whether it is ‘In Use’ and if so, the time remaining to complete the cycle.

Usage statistics of each individual machine are available and full details of each transaction are recorded. This includes whether the selected cycle was a wash, a dry, or a dry top-off cycle, the price paid for the cycle, and any discounts applied to that user.

**Profitable**
The Laundry Controller allows you to maximise profit by reducing coin collection overheads, on-site attendants and service calls. User frequency and loyalty can be driven by users returning to use their unused card balance, and your cash flow is improved by collecting money upfront. This also provides you with a float to earn interest on. Users are likely to spend more on laundry services, as their card balance will usually be more than the coins they will have access to in their pockets.

As the laundry usage will be auditable, rather than relying on operator reporting, Supervisor Net will deliver service providers with an understanding of income on actual laundry services usage, regardless of whether the laundromat is owned or operated by a third party.
